

#MR12866 Nylon Cone

For Everhard's 1-7/16" Diameter Silicone Seam Rollers

Convert Everhard's silicone seam roller into a detail roller with our nylon cone attachment

MADE IN USA

- Adds flexibility to existing 1-7/16" diameter seam rollers, providing roofers with the ability to roll detail areas.
- Removing the metal end cap from the seam roller allows the cone attachment to be inserted and pressed in place.

1. Hold seam roller firmly against table surface or in a vise. Use a screwdriver to pry the metal end cap from the end of the roller.
2. Once the end cap is removed, position stub end of the nylon cone even with the roller's inner diameter and press into place. For best results, the roller can be held in a vise, and the cone tapped in with a hammer.
3. The roller's new shape is ideal for use to work seams and press membrane into place in tight corners. #MR12866 nylon cone is shown with #MR05029 silicone seam roller.

MODEL #	DESCRIPTION	WEIGHT
MR12866	Nylon cone, 2-7/16" long (works with all of Everhard's 1-7/16" diameter silicone roller wheels*)	0.110 lbs.
